Catheters and leg bags

A urinary catheter is a flexible hollow tube to drain urine. It passes through the urethra (the tube from the bladder to the outside) into the bladder. The catheter is held in place by a small balloon that is inflated in the bladder. The catheter is connected to a bag that collects the urine.

- Catheters
- Leg bags
- Incontinence Sheets
- Gloves
- Dressing packs

Wheelchair batteries

RA12-XX EV is specially designed for deep cycle discharge and grouping usage in electric vehicle application. By the special active material design in the plate, it makes battery have more than 300 cycles life time by 100% D.O.D. Specially, the consistency performance of grouping usage is much better than general series.
